

# TUBZZ Cleaning and Operating Instructions

Dear Homeowner,

Thank you for purchasing your bathtub from Custom Jetted Tubzz. We appreciate your business and look forward to making your bathing experience more enjoyable for many years. We design our bathtubs so they are durable, clean, and quiet and with minimal care will retain these qualities. To maintain the elegant look and a clean bathing experience, just follow these simple steps.

## Tub Surface - acrylic, easy to clean and maintain

- Your tub surface is acrylic, the highest quality, most durable tub material available. It is a solid, non-porous surface which prevents discoloration, yellowing, and fading. The color goes all the way through the acrylic sheet; therefore it is not painted or sprayed on.
- Because of the non-porous nature of acrylic, its surface prevents dirt from accumulating and resists stains. Cleaning is easy since mold and dirt cannot penetrate its surface
- Simply wash with soap and water. Rinse well and dry with a soft, clean cloth. If using a household cleaner, be sure it is non-abrasive and recommended by the manufacturer for use on acrylic
- Clean grease, oil, paint and ink stains with isopropyl (rubbing) alcohol
- Minor scratches that may have occurred during construction can be removed by buffing lightly with a clean cloth and an automotive buffing compound (small amounts available free through Tubzz). Deep scratches and/or chips from fallen tile, hammers, etc., can be repaired for a small fee by contacting Tubzz.

## Jetting System - Self draining, clean whirlpool system

- Our new “V Jets” combined with rigid PVC allow for the best drainage of any jetted bathtub available. Use dishwasher detergent monthly with tub full of cold water. Let run for a couple minutes and drain. Every 6-8 months or as needed we recommend Spa.Giene jet cleaner. One bottle equals 10 treatments for 19.99 available at Tubzz.
- Our tubs are self-draining, however, soap residue from bubble bath, shampoo, etc., at times remain behind. This is why we recommend the occasional treatments mentioned above.
- Ozone! Ask us about the latest in purifying your bathtub each time you use the tub. If not installed on your tub already this can possibly be added to your tub. Ozone molecules clean your tub naturally without the use of chemicals and are 200 times more powerful than household bleach and safer on your tub.
- Each jet cover in your tub is removable. Removing these jet covers occasionally and cleaning them is recommended. Clean them by hand or on the top rack of dishwasher. See back page for details on each type of jet.

- Turn on/off tub with button located near top of tub. This is a non-electronic button. When button is pushed air is sent to the motor via a red air hose to activate motor. If motor does not turn on check if the red hose is connected to the motor. Also check GFCI reset button if motor does not turn on. Contact electrician for location of GFCI reset button.

- Each jet is adjustable. Simply turn the jet cover left or right and jet flow will adjust up or down. The nozzle inside the jet cover can be adjusted to angle the jet flow in the desired direction. To remove this jet for cleaning simply slide a flathead screwdriver between jet cover and tub surface. Turn screwdriver and jet cover comes off. To return jet cover, simply snap into place.

- Turbosystem jets are generally located high near upper back and neck. Controlled by a valve control located near top edge of tub. Point valve forward to activate turbo system jets and point backward to turn off. These jets can also be removed for cleaning. Sit facing the jet and using index fingers and thumbs of both hands turn jets counterclockwise ¼ turn. **DO NOT TURN CLOCKWISE TO REMOVE JETS.** To replace jets after cleaning turn clockwise ¼ turn.

- Adjust air control near top of tub. This controls the amount of air that will come out of each jet. If this control is turned all the way to the right (off position) only water comes out of jets. Turn all the way to the left for air and maximum jet power. Depending on number of jets, there might be a couple of these air controls.

## Air System Tubs - therapeutic bathtub

- Push on/off button once to turn on blower. 1 High, 2 Medium, 3 Low, 4 Wave mode. Fifth time will turn blower off. Purge cycle (lasts 2-3 minutes) begins automatically twenty minutes after blower has been turned off.

## LED Chromatherapy Lights - for soaker, jetted and air tubs

- LED's are energy efficient, and can be used with or without water in bathtub
- Push on/off button to cycle through various light shows, first program is the all-color fade.

# Ozone - the most effective jet cleaning system

- Automatic - with Ozone installed - it is automatically introduced to the bath water when the pump is turned on
- Maintenance free, no moving parts to wear out or replace
- Neutralizes sediments such as soaps, oils, and other contaminants that may be found in bath water and plumbing
- Ozone kills up to 99.99% of dangerous germs like bacteria and viruses

# Heater - maintain the temperature of the water in the bathtub

- Heater has been designed to enhance the enjoyment of your whirlpool bathtub. Once filled, the warm relaxing temperature of the whirlpool bath is constantly maintained by a built-in thermostat, as long as pump is operating.
- In-line heaters are pressure activated. When you turn on pump, heater is automatically activated.
- A “heater on” indicator is illuminated while the heater is actively heating the water.

Custom Jetted Tubzz is committed to providing you with the most beautiful, clean, quiet and relaxing bathing experience available. Please call with any further questions (801) 785-8827
